

Made for Each Other

SCADA Compatible Electronic Control Valves from the company who defines excellence

Cla-Val Electronic Control Valves combine the rugged durability needed to exist in the toughest of waterworks environments with the electronic sophistication necessary to provide optimum integration with the most advanced SCADA systems.

Because they provide accurate and reliable remote control, Cla-Val Electronic Control Valves are ideal for difficult to access areas or systems that are spread out over a long distance. Directed by an onsite RTU, they can be configured to perform a wide range of functions, including pressure reducing, pressure sustaining, and flow or level control. They can also be programmed to “multi-task”, providing more than one function in a single valve. In the event of a power failure or loss of signal, the valve’s integral hydraulic controls are engaged to continue performing the functions for which the valve is intended.

Whatever the application, these easy-to-maintain automatic control valves help enable operators to achieve optimum control over their system’s performance and functionality.

Innovation...Experience...Know-How

As a leading manufacturer of automatic control valves, Cla-Val has served the following markets since 1936:

- Waterworks
- Fire Protection
- Aviation Ground Fueling
- Marine and Shipboard Service

We offer many advantages to our customers worldwide, including the following:

- In-house Engineering Department
- Onsite investment and sand casting foundries able to pour more than 50 different metals and alloys
- 20-acre manufacturing facility in Costa Mesa, CA
- Production facilities in Perris, CA; Ontario, Canada; Switzerland; the United Kingdom; and France
- Extensive technical training capabilities
